

# OEM RETROFIT MCC

**About:**

ICS offers a wide range of custom built MCC and replacement buckets for current and obsolete MCC. Motor Control Centers are an industry standard method of centralized motor control and power distribution. Whether the application is indoor, outdoor, or direct spray / harsh environment- MCC is a viable option to create a "localized hub" for motor protection, lighting and general power. Throughout the years manufacturers have released countless series of motor control centers. Even today, many MCC lineups from brands who no longer exist or have been absorbed by today's major manufacturers still stand and operate in control rooms around the world. Regardless of the series of MCC or whether or not it is obsolete, ICS offers replacement and retrofit bucket services to fit your specific needs.

In order to better serve our customers, we take pride in our in-depth knowledge of all MCC systems. We stock current production MCC from Eaton (Freedom 2100), Schneider (Model 6), ABB (Evolution 9000) and Siemens (Tiastar). Beyond these lineups, we are able to provide retrofit buckets for any MCC from the past decades. See figure 1 for a comprehensive chart of the evolution of MCC from all former and present day manufacturers.
